

SYSTEM BAMAR-2

KATEGORIA: system wolnowiszący

BAMAR-2 Metal System is a free-hanging roller blind designed to provide shade for large areas from light. It consists of material attached to a tube, and the entire mechanism is held in place by a pair of metal brackets. A characteristic feature of the mechanism used in this system is its slim profile combined with high durability due to the use of metal mounting.

A large-sized roller blind is achieved by using a tube with a diameter of $\varnothing 38$ mm. The covered area can then reach up to 6/8 m². The chain mechanism used is versatile enough to be applied to all tubes larger than standard sizes ($\varnothing 25$ mm, $\varnothing 28$ mm, $\varnothing 38$ mm, $\varnothing 40$ mm). Reducing sleeves are used to adapt to the tube size..
