

INNOVATIVE MOTOR
SMART BLINDS

Innovative motor SMART BLINDS

Our new, innovative product - the Smart Blinds motor - will allow you to automate the process of operating internal blinds in your home.

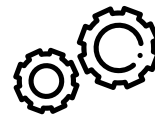

Smart Blinds is also intended for coverings where the application of existing automation solutions is not possible.

The product is available in five colors: white, brown, anthracite, grey and black.

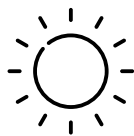

Multifunctionality

Our application allows for connecting multiple devices at one time. This is a solution that facilitates managing several engines at once.

Ease of Use

The installation and operation of the engine have been simplified to the maximum. To mount the engine on the wall, we can use mounting tape or screws.

Eco-Friendly Charging

The engine has the ability to charge using solar energy through a solar panel. By using the solar panel, we do not need to recharge the device with additional energy.

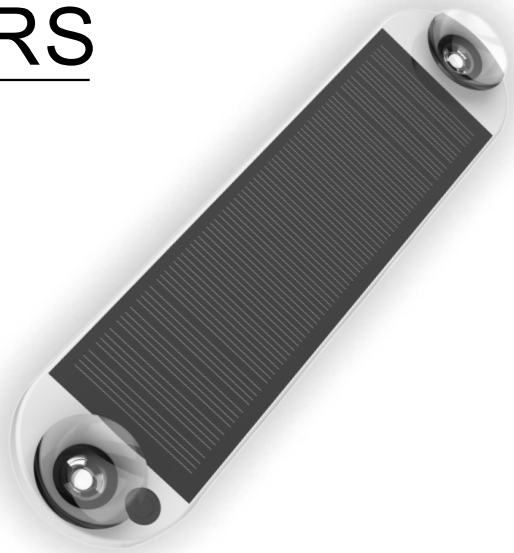

Bluetooth®

Connectivity between the smartphone and the engine is done via Bluetooth technology. Connecting to the device is fully secure thanks to the use of connection encryption.

AVAILABLE COLORS

Smart Blinds engines, along with solar panels, come in five color versions: white, brown, anthracite, gray, and black.

Choosing the right color version has a very important impact on the overall appearance of the external window frame and blind.

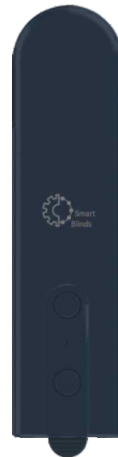

White

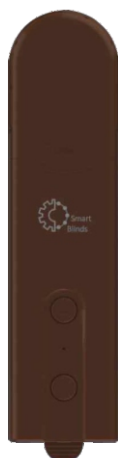

Grey

Anthracite

Brown

Black

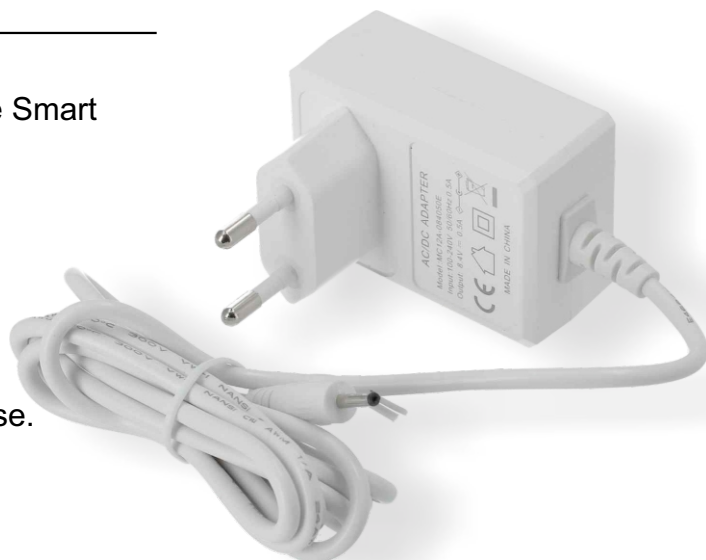

Accessories

Accessories that extend the functionality of the Smart Blinds engine are available.

The compatible accessories include:
a charger, solar panel, chain adapter,
metal chain connector.

Accessories are available for separate purchase.
